

PRODUCT DATA SHEET

Cabinet / Rack Combination Lock

Introduction :

Introducing our innovative data centre cabinet locks, designed for unparalleled security and flexibility. Each lock features a robust three-digit combination system, allowing for individual cabinet security even in shared hosting environments. With the added convenience of a manual key override, our locks ensure you have complete control and peace of mind. Safeguard your data with our state-of-the-art locking solution, perfect for the modern, multi-tenant data centre.

Operation :

Rotate the lock sleeve 180° counterclockwise (the arrow on the lock sleeve corresponds to the unlocking mark on the handle, if the arrow has been right). The handle should be unlocked in the position without rotating the lock sleeve.

Continue to rotate the lock sleeve counterclockwise at a certain angle (if the lock sleeve cannot continue to rotate, the position is correct), and then replace the cipher wheel on the handle Numeric position, after changing your own suitable password, rotate the lock sleeve clockwise to the original position, and the password has been replaced.

Turn the cipher wheel, insert the key to open, pick up the handle and rotate 90° to realize opening or closing.
